

## **SV Key Problem with MFO3 System**

### **Problem:**

Once new SV key is connected to the MFO3 System, SV key cannot be recognized by the system anymore. This problem is occurred since the new SV key records the unrecognizable date which is recorded in PC host.

### **Solution:**

Connect the new SV key to MFO1, MFO2, Contour, Profile, Lx, or Open Speed system. (Any systems which recognize SV key(Rainbow key).)  
Then, use the SV key to MFO3 System.  
Once the recognizable date is recorded to the SV key, it can be used for MFO3 system.

This problem will be solved by MFO3 M4 patch which will be released in this Summer.
